Updated Structure

Use Case: Filter Doctor by Specialization and Name

Attribute	Description
Use Case Name	Filter Doctor by Specialization and Name
Scenario	A patient filters doctors based on a specific specialization and Name
Primary Actor	Patient
Supporting Actors	System
Preconditions	• The system has an up-to-date list of doctors, their specializations. • The patient is logged in and has access to the search and filter functionalities.
Steps	1. Patient enters the desired specialization or can select doctor's name . 2. The system retrieves and filters the list of doctors based on both the specialization and name. 3. System displays the filtered list of doctors who match the specified criteria. 4. Patient selects a doctor from the list to view more details or book an appointment.
Postconditions	• The list of doctors matching both the specialization and name are displayed to the patient.

Test Cases for Filter Doctor by Specialization and Name

Test Case	Description	Input	Expected Outcome	Status
Valid Specialization and Name	Filter doctors by valid specialization and name	• Specialization: "Cardiology" • Name: "Dr. Smith"	List of doctors matching "Cardiology" and "Dr. Smith" displayed	Success
Specialization Only	Filter by specialization only	• Specialization: "Dermatology" • Name: (empty)	List of dermatologists displayed	Success
Name Only	Filter by name only	• Specialization: (empty) • Name: "Dr. Johnson"	List of doctors named "Dr. Johnson" displayed	Success

No Matching Results	Filter with a specialization and name that don't match	• Specialization: "Neurology" • Name: "Dr.Smith"	No doctors found matching criteria	No Results
Specialization with Invalid Name	Filter with a valid specialization and invalid name	• Specialization: "Orthopedics" • Name: "Dr. John@Doe"	Error: Invalid name format	Bad Request

Use Case: Book Appointment

Attribute	**Description**
Use Case Name	Book Appointment
Scenario	A patient books an appointment with a doctor
Primary Actor	Patient
Supporting Actors	System
Preconditions	• Patient is registered
Steps	1. Patient selects a doctor 2. Patient chooses an appointment type (online/offline) 3. Patient selects a suitable timeslot 4. System confirms booking
Postconditions	1. Appointment is successfully scheduled

Test Cases for Book Appointment

Test Case	**Description**	**Input**	**Expected Outcome**	**Status**
Valid Appointment Booking	Book an appointment with valid inputs	• Appointment Type: Online • Timeslot: 10:00 AM - 10:30 AM	Booking Step confirmed	Success
Invalid Timeslot Selection	Attempt to book an appointment with unavailable slot	• Appointment Type: Online • Timeslot: 09:00 AM - 10:00 AM	Warning: Timeslot unavailable	Bad Request
Offline Appointment Booking	Book an offline appointment	• Appointment Type: Offline • Timeslot: 10:00 AM - 10:30 AM	Booking confirmed	Success

Double Booking	Book an appointment for an already-booked slot	• Appointment Type: Online • Timeslot: Already Booked	Error: Timeslot unavailable	Bad Request

Use Cases for Join Online Appointment

Attribute	**Description**
Use Case Name	Join Online Appointment
Scenario	Patient joins an online consultation with a doctor
Primary Actor	Patient
Supporting Actors	Doctor, System
Preconditions	• Online appointment is scheduled
Steps	1. Patient receives link to join 2. Patient clicks link and joins online meeting
PostConditions	• Patient and doctor are connected in the online consultation

Test Cases for Join Online Appointment

Test Case	Description	Input	Expected Outcome	Status
Successful Online Appointment	Join an online consultation	• Appointment ID: APT-98765 • Join Link: `https://example.com/join/token=abc123&user=56789`	Joined successfully	Success
Join as Unauthorized User	Attempt to join meeting as unauthorized user	• Appointment ID: APT123 • Join Link: `https://website.com/?redirect=https://example.com`	Error: Unauthorized access	Unauthorized

Use Case: Request Diagnostic Test

Attribute	**Description**
Use Case Name	Request Diagnostic Test
Scenario	Doctor requests a diagnostic test for a patient
Primary Actor	Doctor
Supporting Actors	System, Diagnostic Center
Preconditions	• Patient has consulted with doctor • Initial Diagnosis Done
Steps	1. Doctor selects diagnostic test 2. System processes request and notifies the diagnostic center
Postconditions	Diagnostic test is requested

Test Cases for Request Diagnostic Test

Test Case	**Description**	**Input**	**Expected Outcome**	**status**
Valid Diagnostic Test Request	Doctor requests a valid diagnostic test	• Test Name: Blood Test • Patient ID: 67890	Test request submitted	Success
Invalid Test Name	Request a diagnostic test with an unsupported test	• Test Name: Bloodfusion-Test • Patient ID: 67890	Error: Unsupported test	Bad Request
Multiple Tests Requested	Request multiple diagnostic tests for same patient	• Test Names: Blood Test, X-Ray, MRI • Patient ID: 67890	Tests requested successfully	Success
Test Request with Urgency Level	Request test with an urgency level specified	• Test Name: Blood Test • Patient ID: 67890 • Urgency: High	Test requested with urgency	Success

Use Case for Prescribe Medicine After Reviewing Drug History(if available)

Attribute	**Description**
Use Case Name	Prescribe Medicine After Reviewing Drug History(if available)
Scenario	A doctor reviews the patient's drug history (if available) before prescribing a new medication
Primary Actor	Doctor
Supporting Actors	Patient, System
Preconditions	• Doctor is logged in and authorized to access the patient's drug history • Doctor has scheduled a consultation with the patient

Steps	1. Doctor accesses the patient's drug history via the system 2. If drug history is available, the system retrieves and displays it for review 3. Doctor analyzes the drug history (if available) to check for any potential interactions 4. Doctor selects medication and dosage for prescription based on analysis 5. Doctor submits the prescription through the system 6. System verifies and saves the prescription 7. System notifies the patient of the prescribed medication
PostConditions	• Prescription is successfully submitted and available in the patient's medical records

Test Cases for Prescribe Medicine After Reviewing Drug History(if available)

Test Case	Description	Input	Expected Outcome	Status
Prescription Without Drug History	Prescribe medication when no drug history is available	• Patient ID: 67890 • Medication: Amoxicillin • Dosage: 500 mg	Prescription saved and patient notified	Success
Prescription With Drug History	Prescribe medication after successful review of drug history	• Patient ID: 67890 • Medication: Amoxicillin • Dosage: 500 mg	Warning: Potential drug interaction displayed and Prescription saved and patient notified	Success
Access Attempt after session expired	Doctor tries to access drug history after session expiry	• Patient ID: 67890	Prescription saved and patient notified	Success

Use Case for Request EHR Update

Attribute	**Description**
Use Case Name	Request EHR Update
Scenario	A healthcare provider requests to update a patient's Electronic Health Record (EHR) with new or corrected medical information, and the system updates the EHR after a diagnostic test is conducted.
Primary Actor	Healthcare Provider, System
Supporting Actors	Diagnostic System
Preconditions	• Provider must be authenticated and authorized to access and update EHR records. • Diagnostic test has been completed and verified. • Patient's EHR data is accessible in the system.
Steps	1. Diagnostic test is conducted and completed by the Healthcare Provider in the diagnostic system. 2. Healthcare Provider sends test results to the system. 3. System updates the patient's record with the new test results. 4. System notifies the patient about the update.

Postconditions	• The patient's EHR is updated with new medical information, test results, or corrections, which are securely saved in the system.

Test Cases for Request EHR Update

Test Case	Description	Input	Expected Outcome	Status
Valid EHR Update with Multiple Fields	Request an EHR update with multiple new health records	• Updated Symptoms: Cough, Fatigue, Headache • Medications: Ibuprofen, Cough Syrup	EHR updated successfully	Success
Duplicate EHR Update	Submit the same update twice	• Patient ID: 67890 • New Medical Info: Allergic to Penicillin	Error: Duplicate entry	Bad Request

Data Conflict in EHR	Test EHR update when conflicting data is present in existing EHR	• Test Name: Blood Test • Patient ID: 67890 • Conflicting Test Result: Elevated Cholesterol • Existing Data: Normal Cholesterol Levels	Warning: Conflicting data; manual review required	Warning
